#### 1. Overall Description:

SA2 thanks SA3 for questions regarding IMS support for AF authorization and information regarding IMS avatar communication in the context of TR 33.790 works.

SA2 would like to answer to the SA3 questions as below.

Q1) Has SA2 considered the impact on the architecture from making the IMS system (or specific NFs) AF aware in general and specifically for authorization purposes?

**SA2 answer on Q1:** SA2 has not considered any impacts on the architecture from making the IMS system AF aware in general or specifically authorization purposes. As described in TS 23.228, the NEF supports its role as defined in TS 23.502, and additionally works as the entry point for subscriptions to notifications for monitoring of IMS related events, via N33 reference point using the Nnef\_ImSEE\_Subscribe service operation. Therefore, the NEF authorizes the AF's request in general and any AF specific authorization procedures or architecture impacts are not expected.

Q2) Different authorization use cases (KI#1, KI#3 in TR 33.790) may require different authorization procedures with impact on different IMS network functions which may impact the architecture. Is it ok that SA3 specifies all these different types of authorization procedures?

**SA2 answer on Q2:** It is not clear to SA2 whether more granular authorization should be left as implementation or should be performed by NEF/HSS, and how much technically essential it is. However, SA2 would like to avoid having multiple options and prefer the minimum impacts in the architecture.

Regarding the several Editor's Notes added for KI#2 " Security of IMS based Avatar Communication " in TR 33.790 for aspects that are in the remit of SA2. SA2 will take into account those aspects during the normative works on Avatar communications.

## **2. Actions:**

### **To SA3**

**ACTION:** SA2 kindly asks SA3 to consider the above information.

## **3. Date of Next TSG SA WG2 Meetings:**

|                      |                 |              |
